

DIGESTIVE COMFORT & FEED EFFICIENCY

ACIDOCUIVRE®

**MICRONIZED
ACIDIFIED COPPER SULPHATE**

*Nutritional Supplement for Poultry
Improve intestinal integrity,
especially in case of water-soaked intestinal faeces*

SMALL PARTICLE SIZE PLAYS A KEY ROLE IN PRODUCT EFFICACY

ADVANTAGES

- ⊕ Broad spectrum antiseptic activity, contribute to reduce medications.
- ⊕ High soluble formula thanks to the micronization of copper sulfate.
- ⊕ Superior bio-availability due to better nutrient absorption and digestion.
- ⊕ High Solubility, no risk of clogging water nipples.
- ⊕ High palatable product thanks to the presence of an organic acid in the composition , no risk of water refusal
- ⊕ Preserve intestinal integrity and growth performances.

ACIDOCUIVRE®

BENEFITS OF COPPER SULFATE FOR CHICKENS

Composition

Minerals:

Copper Sulfate Pentahydrate 845 gm*
Citric Acid 133 gm

*Supplies 211.25 gm of Elemental Copper

Direction of use

Add 1 gm in 3 to 5 lit of drinking water, Incorporate continuously for 5 to 15 consecutive days.

Break of at least two weeks between treatments.

Use of this product is appropriate when increasing water/ food ration.

Packaging

1 kg individual Sachet.
25 Sachet per box.

Promotes Growth

Copper sulfate helps chickens grow faster and stronger. This is because copper is involved in the formation of connective tissue, which is essential for healthy bone development. Copper also helps with the absorption of iron, which is crucial for the formation of red blood cells.

Prevents Disease:

Copper sulfate has antibacterial and anti fungal properties that can help prevent infections in chickens. It is especially effective against E. Coli and Salmonella, two common bacteria that can cause serious illness in chickens.

Improves Feather Quality:

Copper sulfate can help improve feather quality in chickens. This is because copper is involved in the formation of keratin, which is the protein that makes up feathers. Feathers that are strong and healthy can help protect chickens from the elements and prevent injury.

Boosts Immune System:

Copper sulfate can help boost the immune system in chickens. This is because copper is involved in the formation of white blood cells, which are essential for fighting off infections and diseases.

Antioxidant effects:

Vitamins are particularly susceptible to degradation in premixes and during feed processing and storage.

Copper can promote bird health and growth by helping to preserve dietary components that are prone to oxidation.

How Copper Sulfate Works:

Copper sulfate works by releasing copper ions into the body. These ions are then absorbed into the bloodstream and transported to the various organs and tissues in the body. Copper ions appear to bind to functional groups of protein molecules in fungi and algae and cause protein denaturation, resulting cell damage and leakage.

مرغیوں کیلئے کاپر کے حصول کا موثر ذریعہ ایسیڈوکوائر ایک گروتھ پروموٹر ہے۔
پھپھوندی کے باعث آنتوں کے ورم اور پھپھوندی کے سبب دیگر بیماریوں کے تدارک
کیلئے انتہائی موثر دوا ہے۔ پانی یا فیڈ میں کاپر سلفیٹ ملا کر خوراک میں کاپر کی ضروریات پوری
کرنے کیلئے بطور سپلیمنٹ بھی دیا جاتا ہے۔
